

Integrate enterprise applications with our single sign on solution
 Increase user productivity, Increase application security,
 Reduce manual data transfer errors

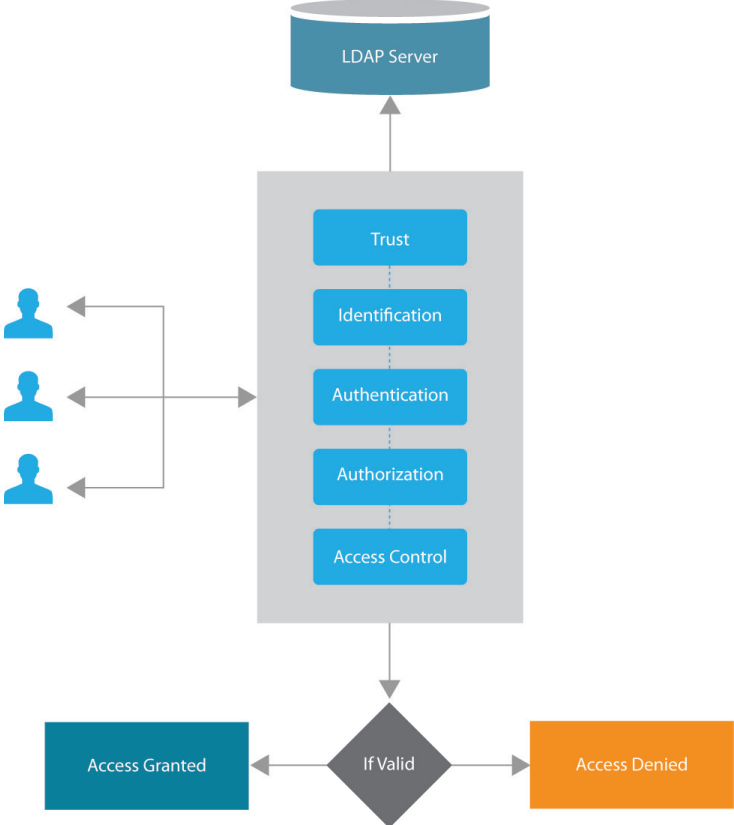

APPLICATION INTEGRATION CHALLENGE

Most enterprise application users today are dealing with siloed environments where data stays within a specific application. Unfortunately, without integration end users are stuck manually entering data into multiple systems and applications, a process that is ineffective and plagued with errors. As a result, business decision-makers don't have the visibility needed to make critical business decisions. The fix, of course, is application integration, but this is a process that's typically been fraught with problems such as ballooning costs and duplicate effort if it works. ValueSoft's Single Sign-on integration accelerator significantly reduces the time required to integrate several applications.

SINGLE SIGN-ON FEATURES

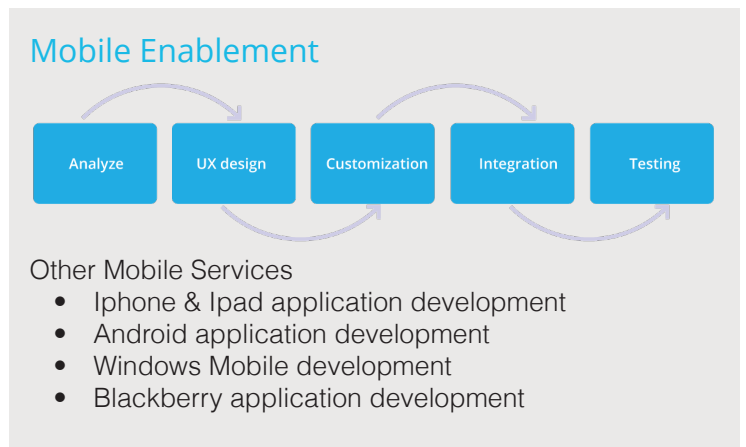

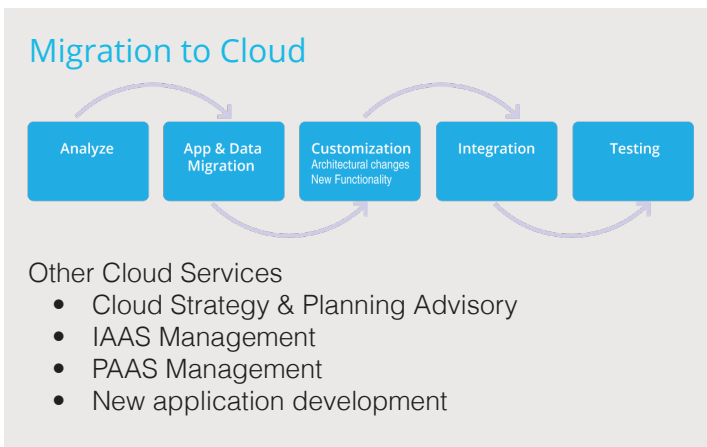

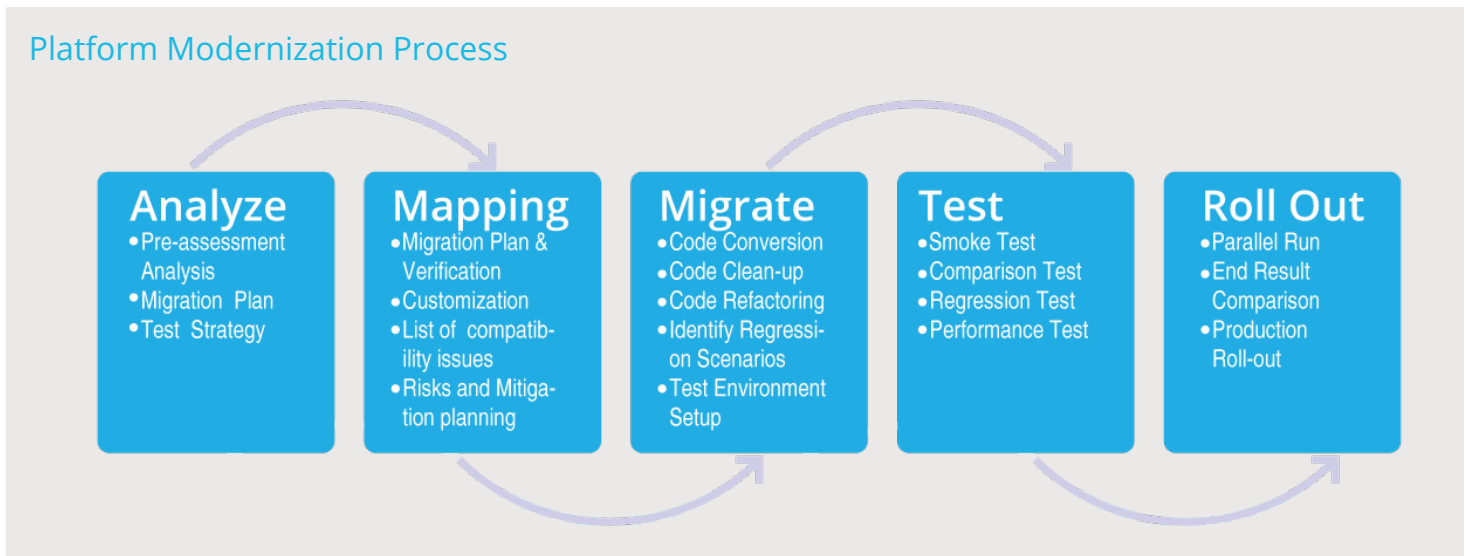

- Develop a single entry web page for all the applications
- Generate hash key for the local server (processor no, system ip, system name etc.)
- Get the Application Data Server User ID for the current login system and authenticate against LDAP server to get E-mail ID.
- Implement encryption/decryption algorithms
- Implement web service to send the parameters to the client server and call the requested web page.
- Web services send data in base 64 and value made available in URL eg., <http://www.xxxx.com/xxx.php/alcon/base64encryptedvalue>
- Modify the website to validate client IP.

SINGLE SIGN-ON ARCHITECTURE

OTHER VALUESOFT SOLUTIONS

We offer Platform modernization, migration to cloud and Mobile enablement of Microsoft technology stack.

ABOUT VALUESOFT

ValueSoft is the preferred Microsoft partner for technology stack migration to the latest platforms, cloud and mobile. We have 10 years of experience helping Tier1 brands with technology modernization, mobile enablement and application integration solutions. We have migrated 10 Million lines of code for our customers.
